

Introducing Nubis **v2.0.0**

Cost Savings, Security, and Features

Overview

- VPC flattening leading to an estimated 40% cost savings
- A completely Dockerized build and deploy pipeline
- Numerous Grafana dashboard enhancements
- Greatly extended metrics coverage in Prometheus
- Worked with WebOps to get a bunch of apps into production
- Even more apps in stage and ready to go live in Q4
- Closed [212 issues](#)
- Additional features
 - Documentation updates
 - System patching
 - Several new usability features including a new security dashboard (in beta)
 - Lots of rough edges smoothed out

Coming in future releases

- Security monitoring dashboard fixups
- Dockerize release process
- Expanding features to support application migrations
- Continuing improvements to documentation
- Improve AWS IAM user management with Auth0
- Upgrade to Ubuntu Xenial
- Switch to CentOS from Amazon Linux
- Puppet 4 upgrade
- Even better Graphana dashboards
- Enhanced Prometheus federator process and visibility
- Nubis service and support capability definition
